AWS Certified Cloud Practitioner (CLF-C02)

Summary

Computer Science graduate (UTSA, Dec 2025) with hands-on experience building REST APIs, relational data models, and role-based auth systems. Seeking an entry-level backend engineering role, with a focus on data driven systems and cloud deployment.

Education

University of Texas at San Antonio - CAICC

December 2025

Bachelor of Science in Computer Science | GPA: 3.38

Relevant Courses: Database Systems, Data Science, Machine Learning, Artificial Intelligence, Cloud Computing

Projects

POS System (In Development) - github.com/JoshCatz/POS-System---POSsym

Python, FastAPI, PostgreSQL, Redis, Celery, React, Tailwind, Docker, AWS, SQLAlchemy, JWT

- Designing a local-first, full-stack POS architecture for restaurant deployment, targeting a Beelink Mini PC per location with planned AWS batch sync for analytics and payroll
- Built and deployed a working REST API (FastAPI, PostgreSQL, SQLAlchemy) covering restaurants, menus, employees, and role-based access control
- Implemented dual authentication flows: HMAC-based PIN hashing for tablet POS login, JWT password auth for the employee web portal
- Containerized services with Docker Compose for consistent local and cloud deployment
- Built functional login flows in React for both the tablet POS portal and employee web portal; broader features (floor map, scheduling, pay stubs) are in active development

Work Experience

Longhorn Steakhouse

August 2024 - Present

Server

- Deliver efficient, high-quality service in a high-volume environment, routinely managing 3-4 tables simultaneously and handling large parties of 12-20 guests
- Assist in training new servers on floor operations, menu knowledge, and service standards
- Lead closing operations as the sole front-of-house server or by delegating back-of-house tasks, ensuring the restaurant is fully prepared for the morning shift

Skills

Programming: Python, PostgreSQL, JavaScript, HTML, CSS, FastAPI, React, Pandas, NumPy, Redis, SQLAlchemy

DevOps & Cloud: Docker, Docker Compose, Celery, AWS, Git, GitHub

Concepts: ETL Pipelines, API Integration, REST API Design, RBAC, Feature Engineering
